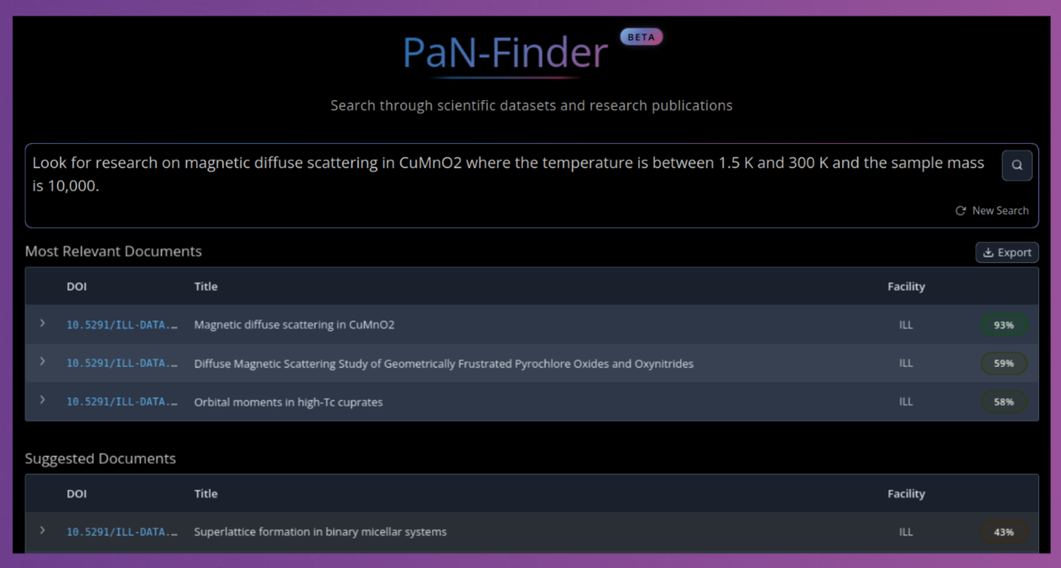
# PaN-Finder

## Photon and Neutron federated knowledge finder

https://oscars-project.eu/projects/pan-finder-photon-and-neutron-federated-knowledge-finder

## Summary

The PaN-Finder project aims to enhance the capabilities of the existing PaNOSC Data Portal, introducing an AI-powered search tool that simplifies user interaction,
enabling intelligent prompt-based searches.



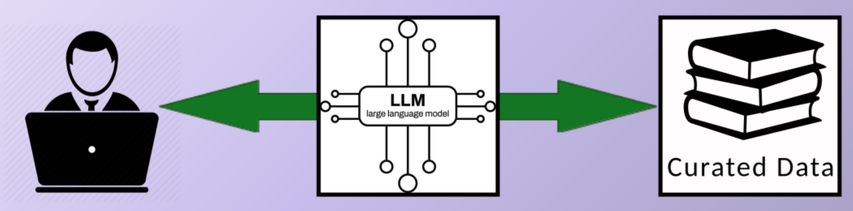
https://pan-finder.panosc.ess.eu/

## Challenge

- Significantly increase findability and reusability of open data available in the federated Photon and Neutron data catalogue
- Overcoming the limitations of legacy experimental data heterogeneously curated

## Solution

Develop an AI assisted prompt based search system



## Results

- Strategies to and relative code base for
  - collect / ingest heterogeneous data
  - search ingested data
- A public facing application: https://pan-finder.panosc.ess.edu
- Methodology to collect user feedback

## Exploitation of results

- Adopting the methodologies in their own projects
- Adopting the code base or relevant portions of it
- Deploying the project with data from their own science domain

## Sustainability

- Deliverables repository (https://github.com/PaN-Finder/deliverables)
- Complete code repository (Public before the end of the project)

Funded by the European Union
